# 0.1"

## PRECISION GRADING

Only Level Best® laser guided grading boxes are precise to within 0.1 inch. Simple attachment for compact track loaders and tractors of all types. Compatible with all guidance systems. Smoothest push-pull operation.

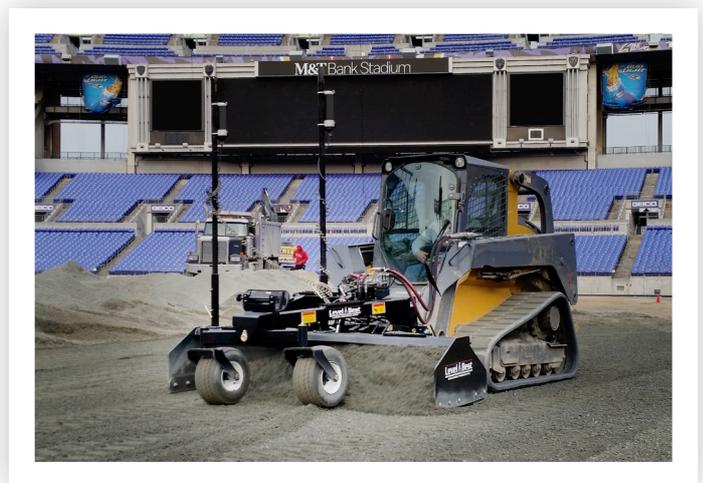

## No Equal for Grading This Precise

For about half the cost of a new pickup truck you can grade to within a tenth of an inch of spec.

### Why grade that precisely? **SIMPLE.**

The more precise the grade, the greater the savings on gravel and concrete costs. Standard 10% overage estimates can be reduced to low single digits. The better the bid, the more contracts you win.

Do the math. How much can you save with only a 2 or 3% material overage? Better yet, call today.

*When grading precision is critical to performance!*
